DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

- a. Species A: sensor is an optical sensor
- b. Species B: sensor includes a switch
- c. Species C: sensor is an electronic sensor
- d. Species D: sensor is electromechanical

2. NOTE: when one of the above is chosen, one of the following must also be chosen.

- i. Subspecies 1: trim signal includes a response portion that is proportional to the force measured
- ii. Subspecies 2: trim signal includes a response portion having hysteresis
- iii. Subspecies 1: trim signal includes a response portion having a dead zone

3. NOTE: when one of the above is chosen, one of the following must also be chosen.

- (1) Sub-subspecies a: trim sensor included in said coupling device
- (2) Sub-subspecies b: trim sensor included in said control servo

4. NOTE: when one of the above is chosen, one of the following must also be chosen.

- (a) Second sub-species I: the first trim controller is responsive onto the polarity of the first trim signal
- (b) Second sub-species II: the first trim controller includes a hysteresis response to the first trim signal
- (c) Second sub-species III: the first trim controller includes a dead zone response to the first trim signal
- (d) Second sub-species II: the first trim controller is responsive only when auto-pilot signal is present

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 33 and 34 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

Art Unit: 3643

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy D Collins whose telephone number is 703-306-9160. The examiner can normally be reached on M-Th, 7:00-4:30.
